SUMMARY

Cybersecurity student at the University of South Florida (3.77 GPA) who builds and investigates security systems outside the classroom: a Wazuh/Sysmon monitoring lab, SIEM detections, Snort IDS rules, memory forensics, and a publicly released phishing-detection Chrome extension. Seeking a SOC / Security Analyst internship.

EDUCATION

University of South Florida - Tampa, FL

Expected May 2028

B.S. in Computer & Information Systems Security (Cybersecurity) | **GPA: 3.77** | Green & Gold Presidential Scholar | Dean's List:
Fall 2024, Spring 2025, Fall 2025

Coursework: Network Security, Threat Intelligence, Malware Analysis, Digital Forensics, Intrusion Detection Systems, Penetration Testing

CERTIFICATIONS

Cisco Certified CyberOps Associate (200-201 CBROPS)

In Progress

TECHNICAL SKILLS

Security Operations: Wazuh, Sysmon, Elastic Stack (ELK/Kibana, KQL), Snort IDS, Wireshark, Nmap, Volatility

Threat Intel & Offensive: MITRE ATT&CK, Cyber Kill Chain, STIX/TAXII, IOCs/TTPs, Metasploit, Burp Suite, Hashcat, John

Networking & Systems: TCP/IP, DNS, HTTP, ICMP, ARP, DHCP, NAT, packet analysis; Linux (Ubuntu), Windows, VMware

Programming: Python, SQL, C/C++, JavaScript, HTML/CSS, FastAPI, Git/GitHub, Chrome Extension (Manifest V3)

CYBERSECURITY EXPERIENCE & LABS

Security Operations Home Lab | Personal Project

2026 - Present

- Built a VMware lab with Windows and Ubuntu endpoints; deployed **Sysmon** and the **Wazuh agent** to forward endpoint telemetry to a Wazuh SIEM and validated the pipeline from event creation to collection, indexing, and dashboard search.
- Investigated Windows Service Control Manager **Event ID 7040** (BITS start-type change) in Wazuh, tracing it from endpoint log to SIEM event and troubleshooting telemetry gaps.
- Performed host discovery, port scanning, and enumeration with Nmap and packet analysis in Wireshark; documented commands, errors, fixes, and evidence in a lab journal.

Security Monitoring & Detection Lab | University of South Florida

2026

- Built **3 SIEM dashboards** in Elastic Stack to monitor authentication, system, and network-security events and surface possible indicators of compromise.
- Developed and tested **10+ KQL detection queries** for brute-force logins (MITRE T1110), repeated authentication failures, and anomalous user behavior.
- Performed SOC-style alert triage and log correlation across hundreds of simulated events, mapping findings to MITRE ATT&CK techniques.

Network Security Monitoring & Detection Lab | University of South Florida

2026

- Enumerated **20+ hosts** with Nmap/Zenmap to identify live hosts, open ports, and exposed services; inspected TCP, UDP, DNS, HTTP, and ICMP traffic in Wireshark to spot abnormal patterns.
- Created and tested **50+ Snort IDS rules**, tuning them to reduce false positives while preserving detection visibility.

Hack The Box & TryHackMe Labs | Self-Directed, Authorized Lab Environments

Ongoing

- Completed multiple labs covering Nmap/NSE and SMB enumeration, DNS zone transfers, Burp Suite SQL injection, Metasploit, and Hashcat/John password cracking, using the attacker's view to inform detection and defense.

PROJECTS

TrustTrace AI - Privacy-First Phishing Detection Chrome Extension | Chrome Web Store v1.0.0

Released Sep 2026

- Designed and published a local-first Manifest V3 extension that analyzes URLs for phishing, lookalike domains, punycode, suspicious redirects, and clipboard-link risks without sending browsing data to a server.
- Built an **explainable risk-scoring engine** that shows why a link is risky through Google search trust badges, pre-visit warning pages, caution banners, Clipboard Guardian, and a Security Report Card.
- Added regression tests and false-positive handling for legitimate Microsoft, Google, GitHub, Duo, Okta, Auth0, Cloudflare, and university SSO login redirects.

Threat Intelligence & Malware / Memory Forensics Projects | University of South Florida

2025

- Modeled attacks with the Cyber Kill Chain, created **10+ IOCs**, and mapped attacker TTPs to MITRE ATT&CK; shared intelligence with STIX/TAXII.
- Analyzed **20+ processes** in memory images with Volatility (pslist, netscan, malfind) to find injection, persistence, and C2.
