Education

University of South Florida - Tampa, FL

Bachelor of Science in Computer & Information Systems Security (Cybersecurity) | May 2028

GPA: 3.77 | Green & Gold Presidential Scholar | Dean's List: Fall 2024, Spring & Fall 2025

Relevant Coursework: Network Security, Threat Intelligence, Malware Analysis, Digital Forensics, Intrusion Detection Systems

Technical Skills

Security Tools: Elastic Stack (SIEM), Snort IDS, Wireshark, Volatility, Nmap

Threat Intelligence: STIX, TAXII, Soltra Edge, MITRE ATT&CK

Web/Development: JavaScript, HTML, CSS, Chrome Extension (Manifest V3), FastAPI, Git, GitHub

Systems: Linux, VMware, Windows

Networking: TCP/IP, DNS, HTTP, ICMP, Packet Analysis

Programming: Python, SQL, C/C++

Technical Experience

Security Monitoring & Detection Lab | University of South Florida | 2026

- **Built 3 SIEM dashboards using Elastic Stack (ELK)** to monitor authentication logs, system activity, and network security events, enabling visualization of potential indicators of compromise.
 - **Developed 10+ Kibana Query Language (KQL) detection queries** to identify suspicious activity, including brute-force login attempts (MITRE T1110), excessive authentication failures, and anomalous user behavior.
 - **Performed SOC-style alert triaging and log correlation** across hundreds of simulated log events, mapping detected activity to relevant MITRE ATT&CK techniques.
-

Network Security Monitoring & Detection Lab | University of South Florida | 2026

- Conducted **network reconnaissance and service enumeration on 20+ hosts using Nmap/Zenmap**, identifying open ports and exposed services across simulated network environments.
 - **Analyzed 500+ network packets using Wireshark**, performing deep packet inspection of TCP, UDP, DNS, and HTTP traffic to detect abnormal patterns and potential attack indicators.
 - Implemented 50+ **Snort intrusion detection system (IDS) rules** tailored to network traffic patterns, enhancing threat detection capabilities and reducing false-positive alerts.
-

Projects

Trust Trace AI – Privacy-First Phishing Detection Chrome Extension

- Built a **Chrome Extension (Manifest V3) tool** that locally analyzes URLs for **phishing, scam, fake login, lookalike-domain, and clipboard-link risks**.
 - Implemented Google **search-result trust badges, pre-visit warning pages, caution banners, Clipboard Guardian, Security Report Card, and explainable risk signals**.
 - Added **regression tests and improved false-positive handling** for legitimate Microsoft, Google, GitHub, Duo, Okta, Auth0, Cloudflare, and university SSO login redirects.
-

Threat Intelligence & Attack Lifecycle Analysis

- Modeled cyber-attacks using the **Cyber Kill Chain framework**, created **10+ IOCs**, and mapped **attacker TTPs** to MITRE ATT&CK techniques.
 - Implemented **STIX/TAXII threat intelligence** standards using Soltra Edge for structured threat sharing.
-

Malware Analysis & Memory Forensics

- Performed memory forensics using Volatility on 1–2 GB memory images, identifying 20+ processes and suspicious artifacts with **pslist, pstree, netscan, and malfind**.
- Investigated **persistence, injected processes, hidden network connections, and attack lifecycle stages**, including exploitation, C2, and installation.
