

Education

University of South Florida - Tampa, FL  
Bachelor of Science in Computer & Information Systems Security (Cybersecurity) Expected May 2028  
Judy Genshaft Honors College • Green & Gold Presidential Scholar •Dean’s List: Fall 2024 • Spring & Fall 2025  
Relevant Coursework:  
Network Security, Threat Intelligence, Malware Analysis, Digital Forensics, Intrusion Detection Systems

Technical Experience

Cybersecurity Security Monitoring Lab University of South Florida | 2026

- Built 3 SIEM dashboards using Elastic Stack (ELK) to monitor authentication logs, system activity, and network security events, enabling visualization of potential indicators of compromise.
- Developed 10+ KQL detection queries to identify suspicious activity, including brute-force login attempts (MITRE T1110), excessive authentication failures, and anomalous user behavior.
- Performed SOC-style alert triaging and log correlation across hundreds of simulated log events, mapping detected activity to relevant MITRE ATT&CK techniques.

Network Security Monitoring Lab University of South Florida | 2026

- Conducted network reconnaissance and service enumeration on 20+ hosts using Nmap/ Zenmap, identifying open ports and exposed services across simulated network environments.
- Analyzed 500+ network packets using Wireshark, performing deep packet inspection of TCP, UDP, DNS, and HTTP traffic to detect abnormal patterns and potential attack indicators.
- Implemented 50+ Snort intrusion detection system (IDS) rules tailored to network traffic patterns, enhancing threat detection capabilities and reducing false positives by 15% within the first month.

Projects

Threat Intelligence & Attack Lifecycle Analysis

- Modeled real-world cyber-attacks using the 7-phase Cyber Kill Chain framework to understand attacker methodology.
- Created 10+ Indicators of Compromise (IOC), including malicious IP addresses, hashes, and attack signatures.
- Implemented STIX/TAXII threat intelligence standards using Soltra Edge for structured threat sharing.
- Documented attacker Tactics, Techniques, and Procedures (TTPs) and mapped them to MITRE ATT&CK techniques.

Malware Analysis & Memory Forensics

- Performed memory forensics using Volatility to analyze 1–2 GB memory images, identifying 20+ running processes and suspicious artifacts using modules such as pslist, pstree, netscan, and malfind.
- Investigated malware persistence mechanisms and attacker evasion techniques, analyzing registry artifacts, injected processes, and hidden network connections to identify potential compromise indicators.
- Analyzed stages of the cyber-attack lifecycle, including exploitation, installation, and command-and-control activity.

Technical Skills

Security Tools: Elastic Stack (SIEM), Snort IDS, Wireshark, Volatility, Nmap  
Threat Intelligence: STIX, TAXII, Soltra Edge, MITRE ATT&CK  
Systems: Linux, VMware, Windows  
Networking: TCP/IP, DNS, HTTP, ICMP, Packet Analysis  
Programming: Python, SQL, C/C++

Achievements

Dean’s List - University of South Florida (3 semesters)  
Green & Gold Presidential Scholar  
Judy Genshaft Honors College Student  
Top 1% National Academic Performance - NEB Examination
